CATALTYTC ACTIVITY: Release of a C-terminal dipeptide, oligopeptide-[-xaa-xbb, when xaa is not Pro, and Xbb is neither algopeptide-[-xaa-xbb, when xaa is not Pro, and Xbb is neither asp nor Glu. Converts angiotensin I to angiotensin II. COTACTOR: BINDS 2 ZINC IONS.

SUBCELLULAR LOCATION: Type I membrane protein.

ALTERNATIVE PRODUCTS: 2 isoforms; somatic (shown here) and testis-specific (AC P22966); are produced by alternative splicing. SIMILARITY: BELONGS TO PEPTIDASE FAMILY M2.

ALTERNATIVE PRODUCTS: 2 isoforms; testis-specific (shown here)
somatic (AC P09470), are produced by alternative splicing.
TISSUE SPECIFICITY: SPERWATOCYTES, ADULT TESTIS.
INDUCTION: EXPRESSION IS THOUGHT TO BE SUBJECT TO HORMONAL

-I - FUNCTION: CONVERTS ANGIOTENSIN I TO ANGIOTENSIN II BY THE TERMINAL HIS-LED, THIS RESULTS IN AN INCREASE OF T VASOCONSTRICTOR ACTIVITY OF ANGIOTENSIN.

-I - CAPALYTIC ACTIVITY: Release of a C-terminal dipeptide, oligopeptide-[-xaa-xbb, when Xaa is not Pro, and Xbb i Asp nor Glu. Converts angiotensin I to angiotensin II.

-I - COFACTOR: BINDS 2 ZINC IONS (BY SIMILARITY)
                                                                                     CHAIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ACE_RAT STANDARD; PRT; 1313 AA. Converts angiotensin I to angiotensin II. COPACTOR: BINDS 2 ZINC IONS (BY SIMILARITY).

SUBCELLULAR LOCATION: Type I membrane protein.
ALTERNATIVE BRODUCTS: 2 isoforms; somatic (shown here) a specific (AC P22968); are produced by alternative splici SIMILARITY: BELONGS TO PEPTIDASE FAMILY M2.

Ra The mRNAs encoding the two angiotensin-converting isozymes are transcribed from the same gene by a tissue-specific choice of alternative transcription initiation sites.";

Ra J. Biol. Chem. 266:3854-3862(1991).

C. --- FUNCTION: CONVERTS ANGIOTENSIN I TO ANGIOTENSIN II BY RELEASE OF THE TERMINAL HIS-LEU, THIS RESULTS IN AN INCREASE OF THE VASOCONSTRICTOR ACTIVITY OF ANGIOTENSIN.

C. --- CATALYTIC ACTIVITY: Release of a C-terminal dipeptide, Coliopeptide-|-xaa-xbb, when xaa is not Pro, and xbb is neither C. --- CATALYTIC ACTIVITY angiotensin I to angiotensin II.

C. --- CATALYTIC ACTIVITY SAME ANGIOTENSIN I to angiotensin II.

C. --- SUBCELULIAR LOCATION: Type I membrane protein.

C. --- SUBCELULIAR LOCATION: Type I membrane protein.

C. --- SUBCELULIAR LOCATION: Type I membrane protein.

Somatic (AC P12822); are produced by alternative splicing.

Converts angiotensin I to angiotensin II. COFACTOR: BINDS 1 ZINC ION.

SUBCELLULAR LOCATION: Extracellular.

DEVELOPMENTAL STAGE: EXPRESSED IN THE AMNIOSEROSA DURING GERM BAND ELONGATION, SHORTENING AND HEART MORPHOGENESIS. EXPRESSED IN MIDGUT THROUGHOUT EMBRYOGENESIS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          FUNCTION: MAY PLAY A ROLE IN THE CONTRACTIONS OF THE HEART,
